

In this lecture we will learn : The Innate behavior, Example of Innate behavior : Taxes,Reflexes, Insticts.

Innate behavior : The behavior that is resulted from the accumulation of reflexes ,inexperience, species specific, unlearned and inheritabl known as Innate behavior .

Characteristics of innate behavior :

- 1.Usually by born or heredity and is preserved through generation.
2. They are species specific,meaning all the species posses this trait.
- 3.The species do not need any previous experience or learning.
- 4.An animal express this behavior for biological needs,adaption or for oher needs.
5. These behaviours are relatively complicated.

Some of the familiar innate behavior of animals are:

1. Fighting behavior
2. Courtship and mating behavior
3. Parental care behavior
4. Migratory behavior
5. Hoarding behaviour

Example of Innate behavior : Taxes,Reflexes, Insticts.

Taxes : A taxes is an innate behavioural response by an animal to adirectional stimulus or gradient of stimulus intensity.
